

What is it?

ScopeMaster is software that analyses the text of user stories.

Who is it for?

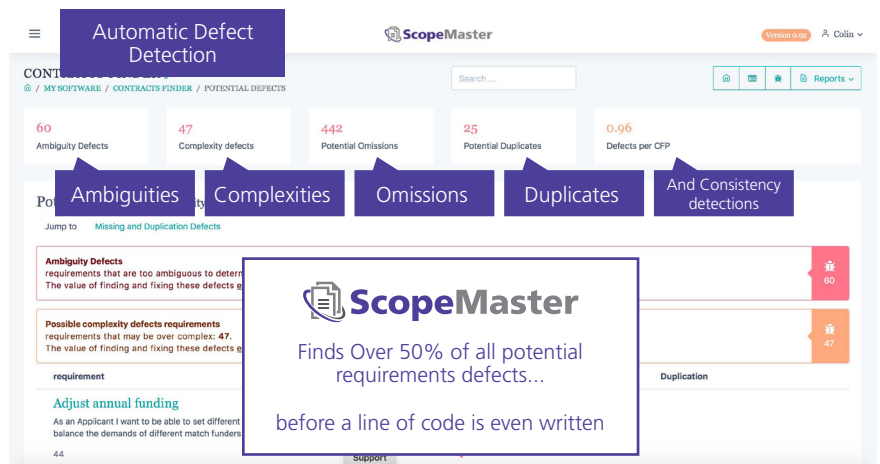

ScopeMaster is a tool for managers of software development and is mostly used by business analysts and product owners in enterprises with a large software estate.

What is it for?

ScopeMaster helps to improve the **quality of user stories** early, which in turn, brings greater certainty to software development projects.

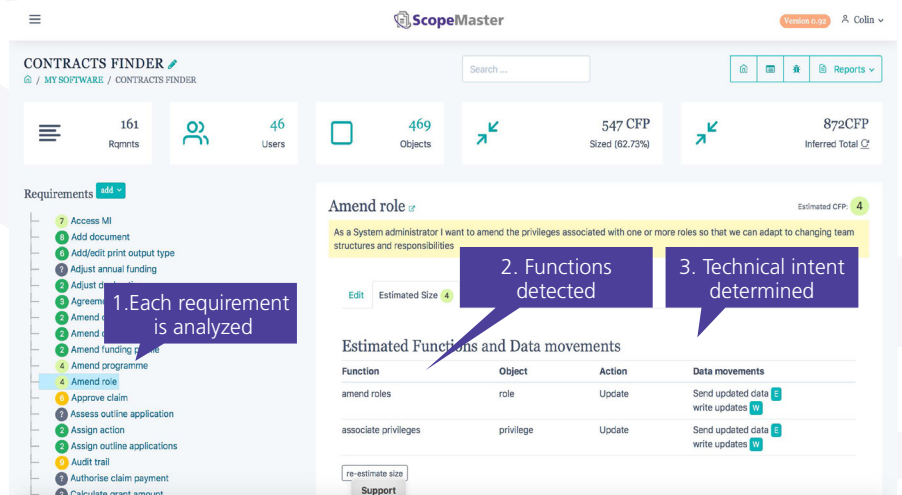

Automated Analysis

Good user stories need to be concise, clear, consistent, complete correct and current. ScopeMaster helps to achieve this quickly by performing automated analysis on the text of user stories to find ambiguities, inconsistencies, omissions and duplicated stories

Problem Discovery and Estimation

ScopeMaster's unique patent-pending analysis technology examines the wording of Agile user stories or traditional software requirements to find potential problems. ScopeMaster will also generate an automated size metric which can be used for estimation and benchmarking.

Features

- Import requirements as user stories via CSV, list or individually (40 per minute)
- Add free form text user stories - (3 seconds to re-analyze)
- Add stories using the simple story editor
- Portfolio View Automated identification of Users and Objects of Interest
- Automated identification of data functions for each user story
- Correlation of functions for each object of interest
- Detection of missing operations against each of object
- Detection of duplicate operations against each object
- Object-naming consistency checker
- Requirements problems reporter
- Requirements history maintained
- Popular browsers supported.
- Sizing report (including ISO standard Cosmic Function Points)
- Sorting and filtering of stories
- Control sharing of stories between multiple users
- Define Admin, Edit and Read level access.
- 9-5 support by phone or email.
- On-boarding assistance
- Single scrum team: 100 user stories updated per month.

Support and Availability Summary

ScopeMaster is available 24x7 (less planned outages of up to 4 hours per week plus 4 hours per month for maintenance). Standard support is included within the subscription fee. This is available by email or phone during UK times 9-5, 5 days per week. Support or production issues are graded based on severity, details are in the service level agreement.

Security

ScopeMaster is a cloud hosted service. Security measures include: regular external expert reviews, protection by Cloudflare's industry leading secure infrastructure services. All data in transit outside the datacenter is encrypted with 256-bit level encryption (TLS). Up to date security patches are maintained on servers and security libraries. Architecture is designed to separate the data layer from application logic. Access checks are performed at three levels within the application. Supplementary permissions can be granted to other users within your organisation.

Professional Services

Expertise is available on achieving quality and correctly sizing of software from requirements is to help you improve your success with ScopeMaster. Please let us know what you are looking to achieve.

Pricing

Prices start at £200 per user per month (based on an annual commitment). Free trial is available.

Example Business Case

Requirements inspections typically take 4 people working together in meetings to find and fix problems with user stories. Total effort is around 5 hours per problem found and fixed. Using ScopeMaster, this takes 15 minutes. For a project consisting of around 100 user stories it would take 2,100 hours manually to find and fix circa 80% of problems, whereas the using ScopeMaster you could find and fix 50% of problems in 100 hours.

Reduced from 5 hours to 15 minutes.
